The $97 Package

The offer a new GetHookd user sees the moment they finish signup. Built against Hormozi's **$100M Offers** section by section, using the full transcript (48,310 words, his own free audiobook release), the 68 logged onboarding calls, our Stripe churn audit, our unit economics, and the decisions Alex made on the Sep 2-3 memo. Nothing in the problem list is invented. Every number below is either counted from the call log or labelled as reported.

What is in the $97 package

- **60 minutes on a call with us.** Not a product tour. We open your niche, run the filters live, and you leave with the ads you are modelling this week. **$300**
- **The AI agent connected to your account, on the call**, and unlocked for 14 days on any plan. We do not send instructions, we connect it and watch it return real results before we hang up. **$379**
- **The twelve master prompts we actually use.** Product discovery, competitor teardown, angle extraction, format mix, hook mining, script generation. **$500**
- **The filter recipe.** One card. Four or five stars, still running, fifteen-plus day runtime, ten-plus active ads on the brand, top five percent by ad rank, active only. Cuts eleven million ads to a few dozen. **$100**
- **Three validated products in your niche**, with the receipts: active ad counts, runtimes, brand scale, format mix. For anyone who has not picked a product yet. **$400**
- **Your real packaging loaded into Brand Assets**, so cloned ads show your box and not an AI approximation of it. **$150**
- **Your top three competitors pulled apart in Brand Spy** before the call: format split, ads over time, landing pages, top hooks, top ten by performance. **$250**
- **200 credits, plus a plan for spending them** week by week, so you neither ration them into uselessness nor burn them in a weekend. **$100**
- **Scripts and landing page structure** pulled from the winners you pick. **$300**
- **Three weeks on Mark's live call. $600**

Total value $3,079. Price $97. One click, on the card already on file.

The guarantee: show up to the call, connect the agent, clone one ad with your own product. Do those three and if you do not have a winning ad live at day 14, your next month of GetHookd is free.

The rest of this document is the case for why these ten items and not others, why $97 and not free, why that guarantee is also our retention plan, and what has to get built before it can go live. Everything is grounded in the 68 logged onboarding calls and Hormozi's **$100M Offers**.

How it maps to the book, chapter by chapter

All sixteen chapters of **$100M Offers**, checked against this offer. Thirteen are applied, one we dropped on purpose, two do not apply to a post-signup upsell. Source is the full 48,310-word transcript of Hormozi's own free audiobook release, not a summary.

13 chapters applied	**1** dropped deliberately
2 not applicable here	**16** chapters accounted for

CHAPTER	WHERE IT LANDS	
SECTION I · How We Got Here		
1. How We Got Here	His origin story, not a framework. Nothing to apply.	n/a
2. Grand Slam Offers	**§5.** His definition is an offer that cannot be compared to anything else, at a premium price, with an unbeatable guarantee and terms that get you paid to acquire. Ours is built to that shape: nobody else puts a human on a call in week one, the guarantee is stronger than the category norm, and the $97 collects 1.24× our average LTV on day one.	applied
SECTION II · Pricing		
3. The Commodity Problem	**§1.** Twelve direct competitors named out loud on our own calls, price-driven purchase demonstrated, and the human call identified as the one thing that decommoditises us.	applied
4. Finding The Right Market, A Starving Crowd	**§2.** All four of his criteria scored: pain strong, targeting strong, growth strong, and purchasing power flagged honestly as the leak. 26% of our calls are price or capital constrained.	applied
5. Charge What It's Worth	**§10.** Why $97 and not free, his virtuous cycle of price, and the agency anchor. One user in our log paid an agency $1-2k a month for a year while bleeding money.	applied
SECTION III · Value, Create Your Offer		
6. The Value Equation	**§3.** Scored honestly on what we sell today: 1.0 of 4. Dream outcome is a 1, the other three are zeroes. Every item in the stack attacks time delay and effort, which is the half he says is hard and therefore defensible.	applied
7. Free Goodwill	His in-book ask for an Amazon review. Our analogue is the Trustpilot ask, which already runs at the bottom of every customer email. It does not belong on a paid upsell page.	n/a here
8. The Thought Process	**§6.** Divergent generation first, the brick exercise applied to delivery vehicles, then trimmed. The Delivery Cube drove how each item is delivered: level of attention, effort expected, medium, and the 10x-to-one-tenth test.	applied
9. Grand Slam Offer Part I: Problems & Solutions	**§4 and §6.** Nine problems counted across all 68 logged calls, not invented, then each turned into a named solution. His rule that one unsolved objection kills the sale is why the list runs to ten items rather than three.	applied
10. Grand Slam Offer Part II: Trim & Stack	**§6.** Nine of the ten items are build-once, one-to-many assets: high value to them, near-zero marginal cost to us. The one exception is the call, and that is the one we cap.	applied
SECTION IV · Enhancing Your Offer		

CHAPTER	WHERE IT LANDS	
11. Scarcity	**§9.** His "honest scarcity": pick the number you can genuinely serve and publish it. Fifteen seats a week is real, because one person runs these calls.	`applied`
12. Urgency	**§9.** Cohort-based (Monday kickoffs, which he notes forces a choreographed onboarding) plus pricing urgency on the promotion rather than the service, so it stays true.	`applied`
13. Bonuses	**§6.** Every one named with a benefit in the title, priced, justified, and matched to a stated objection from a real call. His rule that bonuses should eclipse the core offer is met: core $300, bonuses $2,779. Tools and checklists preferred over more training, exactly as he specifies.	`applied`
14. Guarantees	**§8.** The strongest chapter in the book for us. We use his **conditional delayed second payment** guarantee, the one he ties explicitly to knowing your activation metric. We also use his anti-guarantee logic as the stated reason there is no cash refund, and his refund arithmetic (130% of sales against a doubled refund rate still nets 1.23×).	`applied`
15. Naming	**Dropped on purpose.** We built the MAGIC name, then Vitaley cut it: the page opens with what you get, not with a headline. His own fatigue-variation order is retained as the test sequence for later: creative, then body copy, then the wrapper, then duration, then the enhancer, and only then the monetisation structure.	`deliberate`
SECTION V · Execution		
16. Your First $100,000	**§14.** What has to get built and who owns it, with the three blocking dev items named.	`applied`

> **Where we deliberately depart from him.** He tells you to lead with the name and the promise. We open with the list instead, because Matt read the promise-led version and lost interest at item four, and because our reader has already bought from us ninety seconds earlier and wants to know what they get, not to be sold again. That is a considered departure, not an oversight.

1. The commodity problem, which is the actual disease

> **Alex already named this disease out loud, on the memo call.** Recovered on the improved transcript pass: *"we're kind of shifting right now, obviously churn. The biggest reason for churn right now is because people just get on for a first-time value, they get what they need, and then they leave."* `alex-memo-2026-09-03-ru-v2` That is episodic demand, it is the same thing Mladen has been saying, and it is precisely what this offer is engineered to convert into a recurring reason to log in. The CEO and the CTO already agree on the diagnosis. What has been missing is the mechanism.

Hormozi opens Section II by saying a commoditised offer forces a price-driven purchase and a race to the bottom, and that the fulfilment is identical either way. Our call log is a textbook case. Users named **twelve** direct alternatives on calls: Atria, Foreplay, Winning Hunter, PiPiAds, Minea, ShopHunter, Adplexity, TrendTrack, Parker, CreativeOS, Motion, Afterlib. They compare on price and features, out loud, on the call. One switched to us because we were *"way cheaper"* than Atria. That is a price-driven purchase, and it is the reason a 27% monthly churn number exists.

What we actually sell today: a subscription to a research tool, plus a free call if you happen to book one. Everyone else sells a research tool. So the buyer's only remaining question is price.

> **The decommoditiser is already in the building and we are giving it away.** One user chose us over Atria specifically because *"Atria doesn't interact with customers."* Another said the post-signup call *"is essential because it takes about a week to get familiar with the platform."* We have run 68 of those calls. In **26 of 68 (38%)** the recorded aha moment is something a human taught live, not something the product delivered on its own. That call is the most valuable thing we own and it currently has no name, no price, no guarantee, and no place in the funnel.

2. The market test (pain, purchasing power, targeting, growth)

Hormozi's rule of order: **market beats offer beats persuasion**, and a bad rating on a higher-order item stops the equation. So test the market first.

CRITERION	VERDICT	EVIDENCE FROM THE 68 CALLS
Massive pain	STRONG	Creative volume demands, ad fatigue in small markets, product research eating a whole week. One user: research is *"the biggest chunk of his week."* Another brought ads in-house after paying agencies $1-2k/mo for a year while *"bleeding money."*
Purchasing power	MIXED the leak	**18 of 68 (26%)** show price sensitivity or a stated capital constraint. One explicitly cannot afford a $1,500/mo coaching program. Pre-revenue beginners have pain and no money, which is Hormozi's resume-writer example almost exactly.
Easy to target	STRONG	They cluster: Mark's YouTube, BBA, Alex's content, Reddit "FB Ad Library alternative", dropship courses, mentor word-of-mouth.
Growing	STRONG	DTC e-com plus an AI-native wave. 47 of 68 calls touch the MCP/agent workflow.

> **Verdict: a normal-to-good market with one real leak.** Per Hormozi, a normal market plus a Grand Slam offer is the path for most businesses, and that is exactly where we sit. The leak is that we sell to pre-revenue beginners on pain alone. The offer has to either give them money-making capability fast or stop being aimed at them. This offer does the former.

3. The value equation, scored honestly on what we sell today

```
value = (dream outcome × perceived likelihood of achievement) ÷ (time delay × effort and sacrifice)
```

Hormozi scores offers 0 or 1 on each of the four drivers. Meditation scores 1.5 of 4 and has no billion-dollar company. Xanax scores 4 of 4 and is a multi-billion-dollar product. Here is our current offer, scored the same way.

DRIVER	TODAY	SCORE	THE EVIDENCE
Dream outcome	A winning ad that prints money	1.0	Universal and strong. 66 of 68 calls open with a version of it.
Perceived likelihood	Unknown to the buyer	0.0	*"I don't know how it works." "398 of 400 credits unused in month 4. What do I use them for?"* Nothing in the product tells them it will work for *them*.

DRIVER	TODAY	SCORE	THE EVIDENCE
Time delay	Weeks of self-teaching	`0.0`	One advocate used Explore only for **8 months** and never found Brand Spy, Clone Ads, MCP or the Chrome extension.
Effort and sacrifice	Learn 6 features, connect MCP, write prompts, pick a niche, source a product	`0.0`	**39 of 68 (57%)** carry an activation-failure signal. **47 of 68 (69%)** hit the MCP wall: gated, broken, or never connected.

> **We score 1.0 of 4. We are selling meditation and wondering why it churns.** Hormozi's point is that the top of the equation is easy and lazy, because anyone can make a bigger promise. The competitive ground is the bottom: time delay and effort. Every single thing in the offer below attacks the bottom.

4. The problems, counted from the call log

Hormozi's Step 2 is to list every problem in insane detail, sequenced the way the customer meets them, and then solve every one, because a single unsolved objection kills the sale. These are not hypotheses. They are counted across all 68 logged calls.

#	THE PROBLEM, IN THEIR WORDS	CALLS	
1	**The AI connection is gated, broken, or never connected.** The single most common reason people buy, and the most common wall. One user signed up on Starter, found MCP is Team-only, tried to upgrade, got charged in full immediately, and cancelled **within an hour of signing up**.	47	69%
2	**They never found the features.** Paid for months using only ad-saving. Only Brand Spy for two months. Explore only for eight months. Never discovered Clone Ads, Brand Spy, MCP, or the Chrome extension.	39	57%
3	**Price sensitivity or no capital.** The upgrade that unlocks the value costs more than they want to spend at the exact moment they have proven nothing.	18	26%
4	**No product and no niche.** The churn clock starts before the tool is even relevant. *"The friction is upstream of the product."*	17	25%
5	**Clone Ads gave them something that wasn't their product.** Generated an AI approximation instead of their real packaging. One user asked three times *"what am I getting apart from the background?"*	17	25%
6	**Credit anxiety, in both directions.** Some burn out in two days. Some ration and never spend them. Both churn.	14	21%
7	**The metrics are ambiguous.** Star ranking, spend, "best conversions", performance score. A rep admitted on one call that a metric was ambiguous.	13	19%
8	**Their brand or country isn't in the catalog.** Blocked on the one thing they came for.	9	13%
9	**A bug blocked them entirely on day one.** Onboarding quiz that won't advance. Signup form that won't submit. Shared-domain trial charging instantly. Brands stuck fetching for 24h and undeletable.	5	7%

5. The offer

> **THE OFFER IN ONE SENTENCE.** One hour on a call with us. We connect the AI agent to your account, run the filter that cuts eleven million ads down to the few that are genuinely working in your niche, and you get off that call with a proven winning ad cloned with your own product and packaging in it. If it is not live and working fourteen days later, your next month of GetHookd is free.

The core offer is not information and it is not more tool. It is **the removal of the weeks of confusion that currently sit between signup and first value**, compressed into one hour, which is the bottom of the value equation and the place our churn is manufactured.

6. The stack: every problem above, solved and named

Hormozi's Step 4 and 5: generate every possible delivery vehicle, then trim to the items that are high value and low cost to us, favouring one-to-many assets that cost once and deliver forever. Nine of the eleven items below are build-once assets. Every one carries a price tag and a justification, per his bonus rules.

Core: The 60-minute call `solves #2, #7`

Sixty minutes, one to one, with the person who has run 68 of these and writes down every one. Not a product tour. We open your niche, run the filters live, and leave you with the three ads you are going to model this week.
Value: $300. Because it is the thing that produced the recorded aha in 26 of the last 68 calls.

Bonus 1: MCP connected for you, and unlocked for 14 days at any tier `solves #1, #3`

We connect the AI agent to your account on the call, on your machine, and watch it return real results before we hang up. You keep it for 14 days regardless of what tier you're on. This is the single highest-frequency wall in the log and it currently kills people inside the first hour.
Value: $79 of access plus $300 of setup we normally charge nothing for and nobody completes alone.

Bonus 2: The Master Prompt Pack `solves #1, #2`

The twelve prompts we actually run on calls: product discovery, competitor teardown, angle extraction, format mix, hook mining, script generation. Requested by name by a 100-person affiliate team who wanted them to accelerate their people.
Alex, playing the buyer on the memo: *"if I'm signing up for the $79 to use the AI agent, what do I want out of this? How do I maximise the AI agent? Tell me exactly what I need to do."* `alex-memo-2026-09-03-ru-v2`
Value: $500. A tool or a checklist beats another training, because the effort is lower and the value is therefore higher.

Bonus 3: The 5-Star Filter Recipe `solves #2, #7`

One card. Four or five stars, still running, fifteen-plus day runtime, ten-plus active ads on the brand, ad rank top five percent, active ads only because inactive ads are failed tests. On one call this funnel took the library from 11 million ads to about 44 thousand and the user said it landed perfectly.
Value: $100. Costs us nothing and is the most repeated aha in the entire log.

Bonus 4: The Product Verdict `solves #4`

Don't have a product yet? We run the agent on your niche and hand back three validated candidates with the receipts: active ad counts, runtimes, brand scale, format mix. Not opinions. This is the upstream blocker for a quarter of everyone who signs up.
Value: $400.

Bonus 5: Brand Assets, set up for you `solves #5`

We upload your real product shots and packaging so Clone Ads puts *your* box in the winning ad, not an AI approximation of it. On one call this exact fix landed as *"I think that will fix it 100%."*
Value: $150.

Bonus 6: Your top three competitors, pre-loaded `solves #2, #8`

We put them into Brand Spy before the call and walk the teardown live: format split, ads over time, landing pages, top hooks, top ten by performance. If a brand is missing from the catalog we import it permanently with the Chrome extension on the call, which most users never learn exists.
Value: $250.

Bonus 7: The Credit Burn Plan, plus 200 credits on us `solves #6`

Exactly what to spend credits on, week by week, so you neither ration them into uselessness nor torch them in two days. Plus 200 credits on the house so nothing stalls on a balance.
Value: $100. Marginal cost to us is about $4.

Bonus 8: The Script and Landing Page Pack `solves the "now what"`

From your three winners: the scripts, the hook variants, and the landing page structure they are running. Finding the ad was never the finish line.
Value: $300.

Bonus 9: Three seats on Mark's weekly live call `from Alex's memo`

Alex's point on the memo: roughly 90% of them already know Mark. Three weeks of the live call inside the 14-day window.
Value: $600.

LINE	VALUE
The First Winner Call	$300
MCP connected and unlocked 14 days	$379
The Master Prompt Pack	$500
The 5-Star Filter Recipe	$100
The Product Verdict	$400
Brand Assets set up for you	$150
Top 3 competitors pre-loaded	$250
Credit Burn Plan + 200 credits	$100
Script and Landing Page Pack	$300
Three seats on Mark's weekly call	$600
Total value	**$3,079**
Sprint price	**$97**

Hormozi's rule that the bonuses should eclipse the core offer is satisfied: core $300, bonuses $2,779. The psychological effect is that the core must be worth more than the bonuses, which makes the whole thing read as underpriced.

7. The $197 version (Team and Agency)

Alex's tiering from the memo, honoured: the $29 buyer is a beginner who wants a store that works, the $79 buyer wants creative strategy. Higher tiers get everything above plus their own.

The $197 version: everything above plus The Creative Strategy Vault

- Everything in the $97 offer. Alex's instruction: sweeten the pot, give it to them.
- **The Angle Engine.** Alex's Angle-Generation Super-Prompt v2, already written, plus the angle extraction workflow. 57 of 68 calls ask for angles.
- **Format and testing framework** plus a monthly angle drop, so the offer keeps paying after the sprint ends.
- **Agency workflows:** multi-account MCP, client onboarding built on Brand Spy. 27 of 68 calls are doing client work.
- **AI Commerce Mastery and Tomas's AI calls** from the BBA library.
- **Full "Ask Mark" AI access.** The knowledge-base bot already exists and is in use by setters and BBA students.

Stacked value $5,000+. Price $197.

8. The guarantee, which is also the retention mechanism

Hormozi names four types: unconditional, conditional, anti-guarantee, implied. He also names one specific structure as the best fit for a business that knows its activation metric: the **conditional delayed second payment guarantee**, and his note on it is that it works when you know the action that predicts long-term retention, because it focuses the team on activating the client.

> **THE GUARANTEE.** Do the three things and if you don't have a winning ad live at day 14, your next month of GetHookd is free.
>
> **The three conditions:** show up to the call, connect the AI agent, and clone one ad using your own product.

> **The three conditions are not invented for this document.** They are the onboarding call Vitaley already runs, described in his own words on the same memo: *"first off I have to get feedback on the actual onboarding process, was it smooth, as well as the actual MCP connection, then actually delivering value."* `alex-memo-2026-09-03-ru-v2` Onboarding, MCP connection, value delivered. The guarantee simply puts money behind the three steps of a call that already exists.

Why this is the most important paragraph in the document. Those three conditions are not arbitrary hoops. They are the exact three activation events whose absence is written next to almost every churn risk in our call log. The guarantee does not merely reduce the buyer's risk. **It pays them to perform the behaviour that stops them churning.** Hormozi's line is that tying the guarantee to the actions required for success helps all parties, and here it is literally our retention plan wearing a sales hat.

Why there is no cash refund, and why that is stronger

We use his anti-guarantee logic as the reason why: the Master Prompt Pack and the Filter Recipe cannot be un-seen. Once you have them you have the value whether you cancel or not. So instead of a cash refund we give something worth more than the $97, a free month of the platform. Stated plainly on the page, this reads as confidence rather than a dodge, which is exactly his point about leaning into a damaging admission.

The math, his formula, our numbers

```
130 sales × 10% refund = 117 net  vs  100 sales × 5% refund = 95 net  →  1.23×
```

For the guarantee to lose money, the absolute rise in refunds has to fully offset the absolute rise in sales, which means the refund rate has to double while conversion barely moves. Our exposure is smaller than his example because we refund in product, not cash: a free month costs us about **$3.90 of infrastructure** plus the credits, not $97 of revenue.

`unit economics: reported, Jul-2026`

9. Scarcity and urgency, the honest kind

LEVER	HOW WE DO IT	WHY IT'S TRUE
Scarcity	Fifteen seats a week.	Hormozi's "honest scarcity" is the easiest and most ethical version: pick the number you can genuinely serve and publish it. One person runs these calls. Fifteen is real. Show the counter filling.
Urgency (cohort)	Calls are booked in Monday cohorts. Miss it and you wait a week.	His favourite mechanism, and it carries an operational benefit he names directly: it forces a choreographed onboarding, which is the thing our log says we do not have.
Urgency (pricing)	$97 exists on this page, in the first 24 hours, on the card already on file. After that it is $297.	His pricing-based urgency: put the fear of missing out on the promotion rather than on the service, so it stays true. It is true here because the setup work is only cheap while we are already onboarding you.
Bonus scarcity	Mark's live call seats are capped per cohort.	Genuinely capped. Do not fake this one.

> **Do not fake any of it.** His warning is explicit: a countdown that isn't real costs you credibility and you look like every other wannabe marketer. Our buyers are ad people. They will test it.

10. Price, and why it is $97 and not free

The instinct is to give this away to reduce friction. That instinct is wrong, and the book is unusually direct about why. Lower price lowers emotional investment, which lowers adherence, which lowers results, which is the entire churn problem restated. **Those who pay the most pay the most attention.**

We have live proof in our own log. The free version of this call already exists, is offered to everyone, and produces the pattern where a user takes the walkthrough and then does nothing. A $97 commitment on top of a subscription creates the sunk cost that gets them to the three activation actions.

$97 price, one click, saved card	**$3,079** stacked value
32× value to price ratio	**$1-2k/mo** what a user in the log paid an agency for a year while "bleeding money"
~$4 marginal infrastructure cost of the free-month guarantee	**$0.02** marginal cost per credit

The agency line is the price anchor and it should be on the page. Hormozi's point is that the anchor is not your competitor's tool price, it is the cost of the alternative way of solving the problem. Our buyer's alternative is an agency, a $1,500 coaching program, or four more weeks of their own time.

11. What this actually does to churn

This is the part that matters more than the $97.

METRIC	NOW	MECHANISM THE OFFER APPLIES
30-day gross subscription churn	26.8% `audited`	Activation inside the first hour, and certainly before the first renewal decision.
Retained at 3 months	~40% `Alex`	A user with a live winning ad has a running reason to log in weekly.
Retained at 12 months	10% `Alex`	Same, compounded, plus the Vault's monthly angle drop for higher tiers.
Average LTV	$78 `Alex`	$97 upfront is already 1.24× the average LTV before a single subscription month is counted.
MCP connection rate	low `unmeasured`	Connected on the call, by us, with the agent returning real results before we hang up.

> **The offer pays for itself twice.** Once as front-end cash at 1.24× average LTV on the day of signup, and again as the activation machine that is the only real answer to a 27% churn rate. Hormozi's framing applies exactly: this is the offer that liquidates acquisition cost while the subscription becomes the profit.

12. Where I disagree with the sequencing, and the test that settles it

Alex's stage one on the memo is annual on the thank-you page: upgrade to annual, save 30%, get bonuses. His logic is cash, and the cash logic is sound. A $29 annual pays $200 upfront against a $78 average LTV.

My concern is narrow and it comes from his own number. **10% of revenue is retained at 12 months.** Selling twelve months to someone who has not yet had a single win asks for the biggest commitment at the exact moment perceived likelihood of achievement is at its lowest, which is the weakest position in the value equation. It also does not fix churn. It pulls cash forward from the people who would have stayed anyway, and it invites refunds and chargebacks from the rest.

> **Recommendation: do not kill annual, sequence it.** This offer on the thank-you page at $97. Annual offered at day 14, to a user who now has a winning ad live. That user is a completely different buyer. **The test:** split the thank-you page. Arm A gets annual first. Arm B gets this offer first with annual at day 14. Measure at 30 and 90 days on cash collected per signup *and* M3 retention, not on day-one conversion, because day-one conversion will flatter annual and tell us nothing about the disease.

13. The page the user actually sees

No headline. The page opens with what they get, because they just paid us and the only question they have is what this is. Copy at spice level 5, written for someone deciding ninety seconds after signup whether we were worth it.

ONE TIME, $97 · FOR MEMBERS ONLY · CARD ALREADY ON FILE

Here is exactly what you get.

- **60 minutes on a call with me.** Not a demo. We open your niche, run the filters live, and you leave with the ads you are modelling this week.
- **I connect the AI agent to your account on the call** and we watch it pull real winners before we hang up. You keep it for 14 days whatever plan you are on.
- **The twelve prompts we actually use.** Product research, competitor teardown, angles, hooks, scripts. Not a course. The prompts.
- **The filter recipe.** One card. Takes eleven million ads down to the few dozen that are genuinely working right now. You will use it every day.
- **No product yet? Three of them**, validated, with the proof: how many ads are live, how long they have run, how big the brand is.
- **Your real packaging loaded in**, so cloned ads show your box instead of something the AI invented.
- **Your top three competitors already pulled apart** before you get on the call.
- **200 credits and a plan for spending them**, so you do not ration them into uselessness or torch them in a weekend.
- **Scripts and landing page structure** from the winners you pick.
- **Three weeks on Mark's live call.**

Priced separately that is $3,079. You pay $97. One click, the card is already on file, you do not type anything.

The guarantee. Show up, connect the agent, clone one ad with your own product. Do those three and if you do not have a winner live at day 14, your next month of GetHookd is free. No forms.

No cash refunds on this one, and the honest reason is that once you have seen the prompts and the filter recipe you cannot un-see them. You would keep the valuable part either way. So instead of your $97 back you get a month of the platform, which is worth more.

Two real constraints, not marketing ones. I run these calls myself, so it is **15 seats a week**. And they are grouped into **Monday cohorts**, so taking a seat now puts you in this week's rather than next.

11 of 15 seats taken for Monday

Book my 60 minutes for $97

This price is on this page only, for the next 24 hours. After that it is $297.

14. What has to get built, and who owns it

#	ITEM	OWNER	BLOCKING?
1	Thank-you page on GetHookd (not Stripe) with the saved-card one-click charge	Alex / dev	yes

#	ITEM	OWNER	BLOCKING?
2	Time-limited MCP entitlement, 14 days, any tier	Mladen / dev	`yes, this is the 69% problem`
3	Booking calendar with a real 15-seat weekly cap	Vitaley	`no`
4	Master Prompt Pack and Filter Recipe card, written once	Vitaley	`no, mostly exists in call notes`
5	Activation tracking: call attended, MCP connected, first clone. Needed to adjudicate the guarantee.	Mladen / dev	`yes`
6	Free-month credit mechanism in Stripe	Alex	`no`
7	BBA asset inventory: what's current vs stale (Mark's call, AI Commerce Mastery, Tomas, suppliers)	Vitaley in Skool	`no`
8	Thank-you page split test, offer-first vs annual-first	Alex	`no`

> **The honest risk.** This offer sells my time, and there is one of me. Fifteen seats a week is the ceiling until the call is either taught to someone else or partially productised. Do not launch this against a signup volume that outruns the seats, because a missed call is a worse first impression than no offer at all. The seat cap is not a marketing device here, it is a real operating constraint, which is the only reason it is honest enough to publish.
