

Two versions of the same offer. Both are no-brainers, to two different people.

We built a \$97 package that answers Alex's question from the Sep 2-3 memo. Then Matt read it, said it could be ten times better, and pointed us at what Iman Gadzhi is running right now. We tore that down. This page holds both versions and the recommendation, so nobody has to read two documents to make one decision.

Full detail if you want it: [the \\$97 package in full](#) · [the Iman teardown](#)

1. The split that actually matters

A no-brainer for one person is a chore for another. Some buyers want the value in their hands the second they pay. Booking a call, waiting for it, showing up at a set time, that is friction, and for them it makes the offer worse no matter how good the call is. Other buyers are stuck, know they are stuck, and a human hour is the single most valuable thing you could hand them.

We have been arguing about which of those to build. The answer is that they are two different buyers and we already know both of them are in our signup flow.

In value-equation terms this is precise, not a matter of taste. A scheduled call **adds** time delay and effort for someone who is capable and impatient, and **removes** far more of both for someone who is confused. Same item, opposite effect on value, depending on who is reading. That is why one price and one shape cannot serve both.

2. Version A: what we built

THE \$97 PACKAGE	
Shape	Ten items with the 60-minute call at the centre. \$3,079 of stacked value against \$97.
Best for	The stuck beginner. 25% of our logged calls have no product yet. 57% show an activation-failure signal. For them the human hour is the whole thing.
Strength	The guarantee. Do three things and if no winner is live at day 14, next month is free. Those three things are our activation metrics, so it pays people to do what stops them churning. Nothing in Iman's offer is this good.
Weakness	It is a second real purchase ninety seconds after the first. It needs a calendar. It caps at fifteen seats a week because there is one Vitaley. And Matt stopped reading at item four.

3. Version B: what Iman's model says

THE \$15 NO-BRAINER	
Shape	\$97 \$15. Everything that costs us nothing to duplicate, unlocked the instant they pay. No call, no calendar, no waiting.
Best for	The capable operator who just wants the goods. Our log is full of them: people who self-taught, built their own pipelines, and only wanted the prompts and the filters.

THE \$15 NO-BRAINER

Strength	Almost nobody says no to \$15 when it says \$97 next to it. Zero marginal cost, so it scales without limit. And it still forces the activation actions, which is the entire point.
Weakness	It hands the confused beginner a folder of assets, which is exactly what they already failed to use. It is a worse offer for the segment with the worst churn.

4. The recommendation: put them side by side and let people pick

Not a sequence, not a test to pick a winner. Both, on the thank-you page, in Iman's two-column layout. The buyer self-selects, which is the only way to make it a no-brainer for both people at once.

MOST WILL TAKE THIS

Everything, right now

~~\$97~~ **\$15**

- ✓ The twelve prompts we actually use
- ✓ The filter recipe that cuts 11M ads to a few dozen
- ✓ The AI agent unlocked 14 days, any plan
- ✓ Your top 3 competitors torn down
- ✓ 200 credits and a plan for spending them
- ✓ Scripts and landing page structure
- ✓ The guarantee
- ✗ No call. Nothing to schedule. It is all in your account the second you pay.

IF YOU WANT A HUMAN

Everything, plus 60 minutes with us

\$97

- ✓ Everything in the \$15, unlocked immediately
- ✓ 60 minutes one to one. We open your niche and run the filters live
- ✓ We connect the AI agent for you, on the call
- ✓ Three validated products found for you, with the proof
- ✓ Your real packaging loaded so clones show your box
- ✓ Three weeks on Mark's live call
- ✓ The same guarantee

15 seats a week. Vitaley runs these himself.

Below both: a plain "No thanks, I'll explore on my own" link. Iman's decline button is deliberately unembarrassing and so is ours.

5. Why this beats either one alone, in numbers

Per 1,000 signups. Take rates are **assumptions, not measured** and are the thing the first month of data replaces.

SCENARIO	TAKE RATE	REVENUE / 1,000	PEOPLE ACTIVATED
\$97 only (what we built)	3%	\$2,910	30
\$15 only (pure Iman)	25%	\$3,750	250
Both, side by side	22% + 3%	\$6,210	250

The break-even that settles it: for a \$97-only page to beat a \$15-only page on revenue, more than **3.9%** of signups have to pay \$97. Nobody in this company believes that number is comfortably clear. And on the metric that actually matters, the \$15 activates **eight times more people**. Running both captures the operators who want a human without giving up the volume.

Cost side, so the numbers are honest: the \$15 tier is pure assets, marginal cost around **\$4** in credits and infrastructure. The \$97 tier costs an hour of Vitaley, which is why it is capped and priced where it is. The guarantee pays out in a free month, roughly **\$3.90**, not in cash.

6. What we are copying from Iman, and what we are not

COPYING	NOT COPYING
One promise above the list, not a list as the opening argument	The income claim. "\$373/day" is fine on a free event with a disclaimer page. We are a SaaS with named customers.
The struck-through anchor, so there is one judgment instead of ten	The MacBook and trip giveaway. It would attract exactly the segment our call log flags as the worst fit.
Two columns with explicit red X's showing what you forfeit	Having no guarantee. He can skip it at \$15. Ours is the best thing we have and it doubles as the retention mechanism.
Five or six visual beats instead of ten dense bullets	Per-user countdown theatre. Our buyers are ad people and will spot it.
Proof as roughly a third of the page	

7. The one gap we cannot close ourselves

Iman's page is roughly 40% proof. Ours is 0%. Six named people with earnings circled, three prior events itemised, \$55.6M aggregate. We have 68 logged calls, customers who upgraded live on the call, and Trustpilot reviews, and not one of them is on the page.

This needs **three customers who agree to be named** with a real number next to them. It is the highest-leverage single change available and it is the only one that requires something we do not already have. Starting it tonight matters more than any further copy revision.

8. What we need decided

#	DECISION	OWNER
1	Two columns at \$15 and \$97, or one price? This is the whole call. Everything else follows from it.	Alex
2	Does the \$15 tier get the same guarantee? Recommendation: yes. It costs about \$3.90 and it is the reason the activation actions happen.	Alex
3	Thank-you page with saved-card one-click, plus a \$15 Stripe price.	Alex / dev

#	DECISION	OWNER
4	14-day MCP entitlement at any tier. 69% of our 68 calls hit this wall. Without it neither version works.	Mladen / dev
5	Activation tracking (call attended, agent connected, first clone) to adjudicate the guarantee.	Mladen / dev
6	Permission from three named customers for the proof block.	Vitale
7	Sponsor conversation. Higgsfield pays for Iman's whole VIP tier and gets a bonus slot out of it. Same play is available to us.	Alex
8	Still open from the last doc: annual first on the thank-you page, or this offer first with annual at day 14. Settle on M3 retention, not day-one conversion.	Alex

Sources: live pull of event.monetise.com/lp-1-o and [/vip/vip0-ftk2](https://vip/vip0-ftk2) on 2026-09-03. Our side: the \$97 package doc, the 68-call log (all counts computed across all 68 rows), the audited 30-day gross subscription churn of 26.787%, and reported unit economics from Jul-2026. Take rates in \$5 are labelled assumptions. Matt's feedback relayed by Vitale: "not horrible, could be 10 times better, too many offers, lost me after the fourth."
